Buttock Implants Masterclass

February 7<sup>th</sup>, 2018

## Live Surgery Workshop: Buttock Implant Surgery By Campus Champs Elysees

Our February workshop, BUTTOCK IMPLANTS MASTERCLASS, was a great success with the joint efforts of Tracy Sayag, the president of Campus Champs Elysees and director of the Clinique des Champs Elysees, and Aude Sordet, the France country manager of GC Aesthetics. The learning experience included the faculty and attendees having a great amount of interactions, which was the vision of the Campus administration, Dr. Michael Atlan, and the team of Masters in their preparation of this event. The buttock Masters included: Dr. Matthieu Beustes Stefanelli,

and Dr. Patrick Baraf, who came together to give an educational

and complimentary experiences to fellow surgeons that already have a bit of training in buttock implant surgery.

**Clinical Anatomy for Composite Buttock Augmentation**

This workshop was designed to provide its participants with a comprehensive demonstration of the clinical anatomy for buttock augmentation as well as surgical techniques shown live. Dr. Stefanelli reiterated the

*Dr. Stefanelli demonstrates the important points of anatomy to the participants*

importance of knowing all the anatomical positions to pay attention to, saying,

“This is the keystone for

safety”. He explained this through a dissection video presented with marks well indicated on a cadaver. He explained both enhancing your buttocks with fat grafting between the skin and muscle implant put inside the muscle making the following points:

- No fat in the muscle due to the risk of fat embolism and death
- No implants on top of the muscle due to the risk of malposition, dehiscence, etc.

**PRESIDENTS LETTER**

By Tracy Sayag

The Campus Champs Elysees third workshop, **BUTTOCK IMPLANTS MASTERCLASS**, was a great success. We designed this workshop to give you not only an educational aspect of the new techniques of buttock implants, but also a real time demonstration using live surgery.

The Clinique des Champs Elysees is an environment where these procedures regularly take place and it was a pleasure that we could provide you with this hand-on training in our well-equipped clinic.

We hope you had an inspirational experience where the material learned will add to your medical practice of buttock implants.

Keep an eye out for more upcoming workshops that we have scheduled for the year 2018.

*Our participants meet surgeons from all over the world, building a bigger professional network*

**Member Referral:  
Refer a Fellow-level Colleague**  
By Campus Champs Elysees

On behalf of the CCE membership committee, we encourage all our members to invite your colleagues that are interested in future workshops to join our society. We believe that we can offer our members a high quality, educational program where ideas can be exchanged with respected, well-known doctors who are masters in their domain. This year will feature live surgery workshops ranging from facial surgery, buttock implants, rhinoplasty, and more. If you have a network that include potential members, provide them with examples of how you have benefited at our program. Interested candidates can register for workshops on the Invivox 3.0 Platform at <https://invivox.com/department/profile/campus-champs-elysees>.

## Introducing Curveo™ : A New Buttock Implant By GC Aesthetics

Meeting the needs of both surgeons and patients is key in making and distributing a high-quality product used in the different procedures done in the aesthetic medicine community. These silicone implants, made under the brand Nagor and Eurosilicone, come in both round and anatomical shapes appealing to the different ideas and needs of a customer's satisfaction. The main points that make it easy to choose these implants are that they provide a natural look, precision while being placed, and a better aesthetic result.

### 1. Natural Look.

IMPLEO™ has created a gel, quite cohesive, which is form stable and preserves a natural appearance. Its performance is cutting-edge not only with its resilience, but also its high elasticity

### 2. Place Precisely.

Precise placement of the implants is made easier with dots and lines that help with orientation during the surgery.

### 3. Better Aesthetic Results.

The balanced and natural look created by these implants are a result of the optimized ratio between the base width and the projection when placed intramuscularly or sub-facially.

**LIVE SURGERY WORKSHOP:** Buttock Implant Surgery – Fast, Easy, and Effective By Campus Champs Elysees (continued)

Dr. Baraf explained the XYZ intramuscular technique that he follows while performing his buttock implant surgeries. He talks about how the surgery does not need to be complicated, it just needs to be precise being that the main aim during the procedure is to make sure the implants are identical on each side. He talked about the risks of contamination if the patient does not receive a dressing over the anal area before the surgery, and what are the efforts to make so the recovery for the patient can be more comfortable.

### Buttock Implant Procedure

Using the right techniques, the intramuscular plane can re-create your shape almost without problem.

1. Mark the XYZ points on both buttock cheeks
2. Make your intergluteal incision
3. Place finger into the incision to measure 3 cm down.
4. Use your undermining tool to create a triangular detached area
5. Adjust the enlargement of the detached area to fit the chosen implant
6. Place the implant in the intramuscular area you have created and adjust to make sure there is exact symmetry.
7. Close with nylon sutures after drainage is completed

*Dr. Baraf presents his technique and explains what he will do during his demonstration surgery*

## THE MASTERS

### **Patrick Baraf, MD**

Plastic, Reconstructive and Aesthetic Surgery

### **Mathieu Beustes-Stefanelli, MD, MBA**

Plastic, Reconstructive and Aesthetic Surgery, Anatomist

### **Michael Atlan, MD, PhD**

Microsurgical breast reconstructions;

Implant based reconstruction;

Aesthetic innovation

Evaluation of plastic surgery innovations, especially for breast

# OPEN & CLOSED RHINOPLASTY & ADD'L RHINO BY AH MASTERCLASS

Dr. Michael Atlan, MD PhD, TBA

3-DAY ADMISSION

ADMISSION-2900 €

JULY  
25-27  
2018

CAMPUSCHAMPELYSEES

## Course Overview

The 3-day OPEN & CLOSED RHINOPLASTY & ADDITIONAL RHINO BY AH masterclass will be a comprehensive training where the experts of rhinoplasty will demonstrate and explain their techniques.

**The first day** of the workshop you will learn the anatomy and anatomical variations of the area, along with the instruments used for the techniques. You will also see the best options for preparations of the procedure and the pre-op planning. Open and closed rhinoplasty exposure will be discussed as well as the post-op for improving the results of your surgery.

**Day two** will give you the chance of true hands-on practice. You will partake in a cadaver lab at the Ecole de Chirurgie du Fer à Moulin where you execute techniques and exercise through repetition on fresh cadavers.

**Day three** you will observe live surgeries performed by the Masters. You will experience up-close and personally how the techniques are done, with narration, followed by a debriefing and the ability to ask thorough questions.
